

What is historical load?

A process that transfer all historical data from source to destination system. Reasons for historical load could be setting up a new data warehouse or when there are major changes. It is a time consuming process as it involves large data transferring.

Full Load: A process that involves transferring all data from source to target storage. It is a scheduled process i.e. weekly or monthly. It could be time consuming when data is huge.

Incremental Load:-

A process that transfers the changed or updated data from source to target storage since the last transfer.

It is usually done on regular basis like hourly or daily. It is faster in execution other than history or full load.

Incremental load services to track changes using time stamps or any other identifier.
