

Task #2

Write the following queries using Northwind DB:

1. Retrieve the product name, unit price, and units in stock of all products that cost less than \$20, ordered by product name.

**select productName, unitPrice, unitsInStock from Product where unitPrice < 20
order by productName;**

2. Retrieve the order ID, customer ID, and order date of all orders that do not have a customer ID, ordered by order date.

**select orderId, custId, orderDate from SalesOrder where shipRegion is null order
by orderDate;**

3 - Retrieve the category names of all products, as well as the countries to which orders have been shipped, without any duplicates.

select distinct(T1.productName), category, Supplier.country from

(select productName, supplierId, Category.categoryName as category from Product join
Category on Product.categoryId=Category.categoryId) as T1

join Supplier On T1.supplierId=Supplier.supplierId;
